Environment Snapshot

- Spectra® T120 with LTO-3
- Up to 10 TB of data
- Exchange and SQL databases
- Up to 20 HP servers
- Syncsort Backup Software
- Fibre Channel SAN

Spectra T120 with LTO-3

Situation & Solution

VSA Partners

VSA Partners is the design agency to some of the best businesses and brands in the world. Its strategy and design have shaped communications, inspired change and accelerated the competitive metabolism in dozens of leadership companies.

VSA originally used an ADIC Scalar 100 with AIT-2 media to store and protect its digital graphics data. Although VSA reviewed another ADIC library to replace the outdated system, they ultimately selected a Spectra T120 library instead.
VSA chose Spectra Logic for its strong support reputation, the T120's Xiotech interoperability and BlueScale software feature set.

Solution Recap

Spectra T120 Library: Enterprise-class storage in a library that scales to readily meet demand. It comes with a feature set that can be highly customized, so that you get only the features you need and none you don't. The high-density Spectra T120 library can expand to 120 tape slots in a single frame, and beyond that to four frames that stack in a rack-mount configuration.

Spectra Certified Media: TeraPack cases loaded with Spectra Certified Media provides the convenience of already loaded and packaged TeraPack magazines, each with eight unique bar-coded tapes, and with another unique bar code on the magazine. The magazines have snap-on dust covers. TeraPack media management saves staff time and effort, with staff handling packs of media instead of being required to handle every individual cartridge.

SpectraGuard Support: Best-in-industry support with a guaranteed response time.
