Customer Success

Environment Snapshot

- 2 Spectra T950s
- 3 Spectra T120s
- 1 Spectra T50
- 1 Spectra 12K
- Up to 5TB of data
- More than 1000 HP and Sun servers
- Fibre Channel Connectivity
- MS Windows and Sun Solaris Operating System
- Oracle and SQL databases

Situation & Solution

NTT Europe Online

NTT Europe is the European arm of NTT Communications, the international division of the NTT Group. They offer a range of resilient global network services and Internet solutions for multinational companies and provide connectivity within Europe and from Europe to Asia and the Americas.

NTT Europe uses several Spectra Logic libraries as part of its data protection and backup environment, including: two enterprise-class Spectra T950 tape libraries, three mid-range Spectra T120 tape libraries, one Spectra 12K AIT library and an SMB-sized Spectra T50 library.

Solution Recap

T950 Library: Most innovative, cost-effective, and flexible enterprise library available.

T120 Library: The high-density Spectra T120 library can expand to 120 tape slots in a single frame, and beyond that to four frames that stack in a rack-mount configuration.

T50 Library: Features such as CoD, SLS and encryption set a new standard for entry level libraries. It has multiple generations of Spectra Logic hardware and software technology underpinning its integrity.

Certified TeraPack® Media: TeraPack cases loaded with media—Spectra Certified Media supplies already loaded and packaged TeraPack magazines, each with 10 customized/unique bar-coded tapes, with another barcode on the magazine. The magazines have snap-on dust covers. TeraPack media management saves staff time and effort, so that staff handles packs of media instead of being required to handle every individual cartridge.

SpectraGuard Support: Best-in-industry support with a guaranteed response time.
